

To Whom It May Concern:

I have had the pleasure of contracting and working with James Solecki of INTEGRA Works Custom Lighting Solutions on several projects over the past 3 years. James designed and installed lighting at my cottage, my house and most recently at Öviinbyrd Golf Club at Still's Bay.

From the initial design phase, we knew that we wanted something different when it came to lighting the club house, grounds, the main gates, commons, roadways and parking areas. We wanted to create a unique ambiance for our Members that extended beyond daylight hours across large portions of the property and wanted more depth and intrigue than what traditional lighting systems could provide.

James achieved exactly the look and sensory experience that we envisioned. By combining the use of invisible infrastructure and his ability to design depth-filled nighttime views, we have a unique experience after dark. Not only do the clubhouse and surrounding grounds look wonderful but our members can also have some fun on our practice green after dark as it has been lit in a soft, unobtrusive and ethereal light. This is something I hadn't seen from James before and it is very impressive.

The outdoor lighting system at Öviinbyrd was a significant undertaking, involving the installation of an extensive wiring infrastructure and hundreds of components. INTEGRA Works capably handled the entire job; from design to procurement, coordination of trades to installation. Each phase was installed successfully, on-time and on-budget.

Having now worked with James on several projects I am familiar with his outstanding commitment to customer service his integrity and his passion. I am happy to recommend him without reservation.

Sincerely,

Peter Schwartz
Öviinbyrd Golf Club
